SUMMARY

Full Stack AI Engineer with 5+ years of professional experience building scalable web applications (React, Node.js, MongoDB, PostgreSQL, AWS) and integrating Generative AI into production products: RAG chatbots, LLM-powered automation, NLP sentiment analysis and agentic workflows. Hands-on with Python and FastAPI services, vector search (pgvector, Pinecone), n8n workflow automation, queues (Bull/Redis, Kafka) and Dockerized deployments on AWS. Experienced in leading small teams and delivering business-driven results.

Technical Skills

Languages: JavaScript, Python, SQL, C

Full Stack: React.js, Node.js, Express.js, FastAPI, REST APIs, Microservices, HTML, CSS

Generative AI & ML: LLM Integration (OpenAI APIs), RAG, LangChain, Agentic Workflows, Prompt Engineering, Fine-tuning, NLP, Sentiment Analysis, Machine Learning, Vector Databases (pgvector, Pinecone)

Automation: n8n (workflow automation, webhooks, API integrations)

Databases & Messaging: MongoDB, PostgreSQL, Redis, DynamoDB, Kafka, RabbitMQ, Bull Queue

Cloud & DevOps: AWS (EC2, ECR, S3, CloudFront, Glue, Athena, EMR), Docker, Nginx, GitHub

Other: Salesforce Apex, jsforce, System Design, Data Structures & Algorithms (DSA), Jira

Education

Uttarakhand Technical University, B.Tech in Computer Science **July 2016 – Sep 2020**

- GPA: 7.8/10.0
- Coursework: Computer Architecture, Data Structures and Algorithms, Theory of Computation

Experience

Senior Full Stack Developer, 360degreeCloud – Noida, UP **Aug 2026 – Present**

- Building a Salesforce data backup, restoration and archival platform that moves Salesforce data to AWS using Salesforce Apex, jsforce/Node.js middleware, AWS Glue, Athena, EMR and DynamoDB.
- Designed and developed microservices-based components, containerized them with Docker, managed images in Amazon ECR and deployed them on Amazon EC2.
- Set up and configured production environments, including integrating and managing required JAR dependencies for stable deployments.
- Building agentic AI workflows to automate and streamline project processes.
- Leveraging AI-assisted development tools (Claude, Cursor, Grok) to accelerate coding, debugging and delivery.

Full Stack Developer (AI), Adglobal360 – Gurugram, Haryana **Apr 2024 – Aug 2026**

- Built a GenAI-powered Business Insights Chatbot using a Retrieval-Augmented Generation (RAG) pipeline with LangChain, Python FastAPI and PostgreSQL (pgvector), delivering real-time, client-wise business analytics and natural-language Q&A over multi-location business data.
- Built an NLP sentiment analysis and auto-reply pipeline for Google Business (GMB) customer reviews that classifies review sentiment and uses an LLM to generate and post context-aware replies, reducing manual response effort across multi-location businesses.

- Developed a multi-location Google Business Management (GMB) automation and analytics platform, plus two ISO 27001-compliant Regulatory Data Management solutions, using React, Node.js, MongoDB, SQL, Redis, AWS and Nginx. Increased application load speed by 40%.
- Redesigned the post-creation workflow from a race-condition-prone in-memory deduplication approach to an atomic architecture using a compound unique MongoDB index (businessId, idempotencyKey) and a Bull/Redis queue with a 202 Accepted response pattern, eliminating duplicate-post failures.
- Built a React QR code generation component (html2canvas, jsPDF) for exportable business assets and resolved a CloudFront CORS issue by pre-converting CDN image URLs to base64.
- Debugged and fixed a MongoDB aggregation pipeline regex bug caused by unescaped special characters, restoring search reliability across the platform.

Software Engineer, Team Lead, Solis Technologies – Gurugram, Haryana **Apr 2023 – Mar 2024**

- Led a small development team, coordinating task delegation and code reviews to ensure on-time delivery across multiple client projects.
- Designed and built 5 professional websites and client dashboards; implemented Node.js and PHP features to improve functionality and user interactivity.
- Collaborated with international clients to gather requirements and deliver solutions; optimized front-end performance and responsiveness across devices.

Full Stack Developer, DDReg Pharma – Gurugram, Haryana **Mar 2022 – Apr 2023**

- Developed and maintained a Human Resource Management System (HRMS) using Node.js, React and MongoDB, with modules for employee onboarding, attendance, payroll, leave tracking and performance evaluation.
- Built RESTful APIs to integrate HRMS modules with internal reporting tools, streamlining data flow across departments.
- Participated in code reviews and worked with QA and business stakeholders to deliver functional, tested features.

Front-end Developer Intern, Verts Pvt. Ltd. – Noida, UP **Feb 2021 – Jan 2022**

- Developed new website features and converted design mockups into responsive, cross-browser-compatible pages using HTML, CSS and JavaScript, contributing to a 30% increase in user engagement.

Key AI & Automation Projects

- **Salesforce to S3 Backup Automation:** Built an n8n workflow that exports Salesforce data to Amazon S3, catalogued with AWS Glue and queryable through Amazon Athena.
- **RAG Document Q&A:** Implemented a Retrieval-Augmented Generation (RAG) pipeline using LangChain and Pinecone for real-time document question answering.
- **AI Knowledge Assistant:** Built an assistant integrating OpenAI APIs with a React frontend, applying NLP and prompt engineering for accurate, context-aware responses.
